To add polynomials we simply add any like terms together ... so what is a like term?. Like Terms. Like Terms are terms whose variables (and their exponents such as the 2 in x 2) are the same.. In other words, terms that are "like" each other. Note: the coefficients (the numbers you multiply by, such as "5" in 5x) can be different.

FACTORING POLYNOMIALS 1) First determine if a common monomial factor (Greatest Common Factor) exists. Factor trees may be used to find the GCF of difficult numbers. Be aware of opposites: Ex. (a-b) and (b-a) These may become the same by factoring -1 from one of them.
