How to automate SSH login with password? I'm configuring my test VM, so heavy security is not considered. SSH chosen for acceptable security with minimal configuration. ex) echo password | ssh id@

How to automate SSH login with password? - Server Fault

Primary Authentication with Device Fingerprinting . Include the X-Device-Fingerprint header to supply a device fingerprint. The device fingerprint is used in the following ways. If the new or unknown-device email notification is enabled, an email is sent to the user if the device fingerprint sent in the header is not associated with previous successful logins.

Authentication | Okta Developer

The "challenge password" requested as part of the CSR generation, is different from the passphrase used to encrypt the secret key (requested at key generation time, or when a plaintext key is later encrypted - and then requested again each time the SSL-enabled service that uses it starts up).Here's a key being generated, and the beginning of the generated key:

ssl - What is a challenge password? - Server Fault

I had kinda same problem: psql -hlocalhost -d<myDB> -U<myUser> always prompted me for password. This is as @Erwin explained because of -hlocalhost is connecting through TCP and not through the Unix-domain socket (for Unix based OS). So even if you've configured your local as trusted:. local all all trust

@StephenHolt I'm fairly certain every terminal-based password input I've ever encountered chose to echo nothing to the terminal. Given the security benefits and the fact that this is a well-known convention in the Unix world, I personally think echoing nothing is the right choice, unless you believe your user base is likely to be unfamiliar with the use of terminals (in which case it's ...
