If a name used in a SQL command could be either a column name of a table or a reference to a variable of the function, PL/SQL treats it as a column name. This corresponds to PL/pgSQL 's plpgsql.variable_conflict = use_column behavior, which is not the default, as explained in Section 43.11.1.It's often best to avoid such ambiguities in the first place, but if you have to port a large amount of ...
