A simple equation, Pythagorean Theorem states that the square of the hypotenuse (the side opposite to the right angle triangle) is equal to the sum of the other two sides.Following is how the Pythagorean equation is written: $a^2+b^2=c^2$. In the aforementioned equation, c is the length of the hypotenuse while the length of the other two sides of the triangle are represented by b and a.

This theorem states that in any right triangle the square on the hypotenuse is equal to the sum of the squares on the other two sides: $r^2 = x^2 + y^2$. More than 100 different proofs have been given for this extremely important theorem of euclidean plane geometry, which is named for the Greek philosopher and mathematician Pythagoras (sixth century B.C.).
