Intland Software's Reseller & Service partners are certified to demonstrate, bill, deploy, and provide services around codeBeamer ALM. Members of our partner ecosystem will understand your development environment and pain points, and will recommend solutions using codeBeamer ALM.

Partners - intland.com

One of the new roles introduced by agile software development is that of the team coach. Until agile came along, coaches were confined to the executive suite or the sports field. As with any new role, it will take awhile before it is fully understood and scoped. Agile teams can—and do—exist without the coach role, but such teams do not necessarily achieve peak performance.

The Role of the Agile Coach | AgileConnection

Application lifecycle management (ALM) is the product lifecycle management (governance, development, and maintenance) of computer programs.It encompasses requirements management, software architecture, computer programming, software testing, software maintenance, change management, continuous integration, project management, and release management.

Application lifecycle management - Wikipedia

Agile teams are self-organizing, which means they do not need supervisors—at least in theory. But they do need leaders to create a shared vision of what the product will be. And having an agile team means that anyone can step up … including you. Lanette Creamer outlines seven qualities possessed by great agile leaders.

Seven Signs of Great Agile Leadership | StickyMinds

Key performance indicators help managers gauge the team's progress, understand what phase the project is in, and figure out where costs, goals, or processes need to be adjusted. This article details some typical KPIs to be used in dashboards to provide business analytics and communicate information in the most useful way.
